

# Introduction to Data Visualization

Alark Joshi

# Introduction

- Ph.D. in Computer Science with an emphasis on Data Visualization - University of Maryland
- Postdoctoral Fellow - Yale University
- Conduct research on developing effective visualizations
  - Neurosurgical applications
  - Atmospheric Physics
  - Computational Fluid Dynamics

# Why are we here?

# Goals

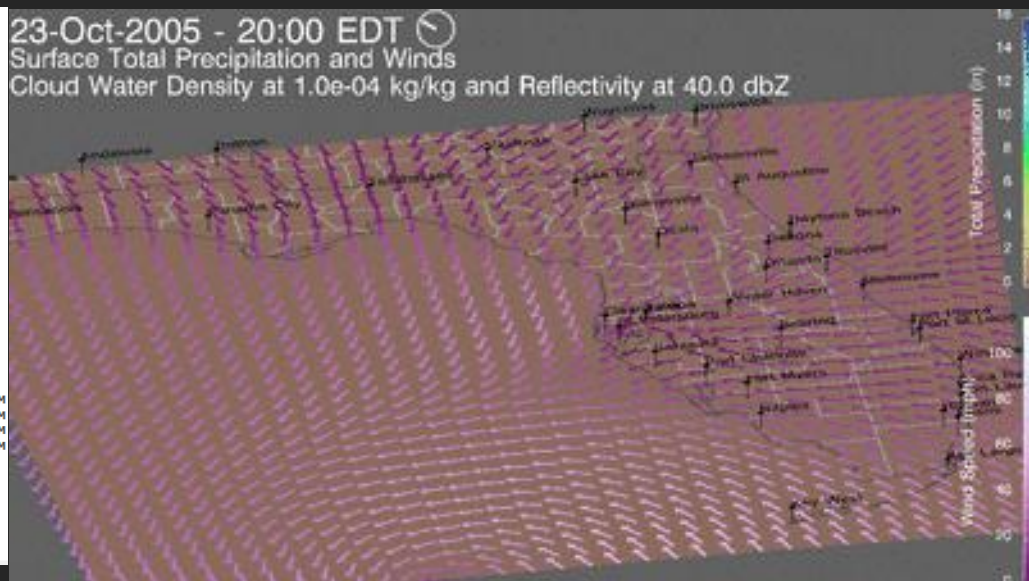

- Understand what makes a visualization effective through the study of core principles
- Critically evaluate a visual representation of data by looking at various examples in media (newspapers, television and so on)
- Gain hands-on experience with visualization tools (Tableau, Many Eyes, Prefuse, Parallel Sets)
- Incorporate visualization principles to build an interactive visualization of your own data

# Data Scientist

- Professionals responsible for filtering out the noise and analyzing essential information
- Integral part of **competitive intelligence**, a newly emerging field that encompasses **data analysis** to help businesses gain a competitive edge
- A shortfall of about 140,000 to 190,000 individuals with analytical expertise is projected by 2018
- Glassdoor.com shows average data scientist salaries ranging from \$60,000 to \$115,000

# What is Data Visualization?

- Visual Representation of Data
- For exploration, discovery, insight, ..
- Interactive component provides more insight as compared to a static image

# In-class Reading

- Seven things you need to know about Data Visualization (5 mins)
- What did you find out that you about data visualization did not know?

# Types of Data Visualization

- Scientific Visualization –
  - Structural Data – Seismic, Medical, ..
- Information Visualization
  - No inherent structure – News, stock market, top grossing movies, facebook connections
- Visual Analytics
  - Use visualization to understand and synthesize large amounts of multimodal data – audio, video, text, images, networks of people ..

# Scientific Visualization

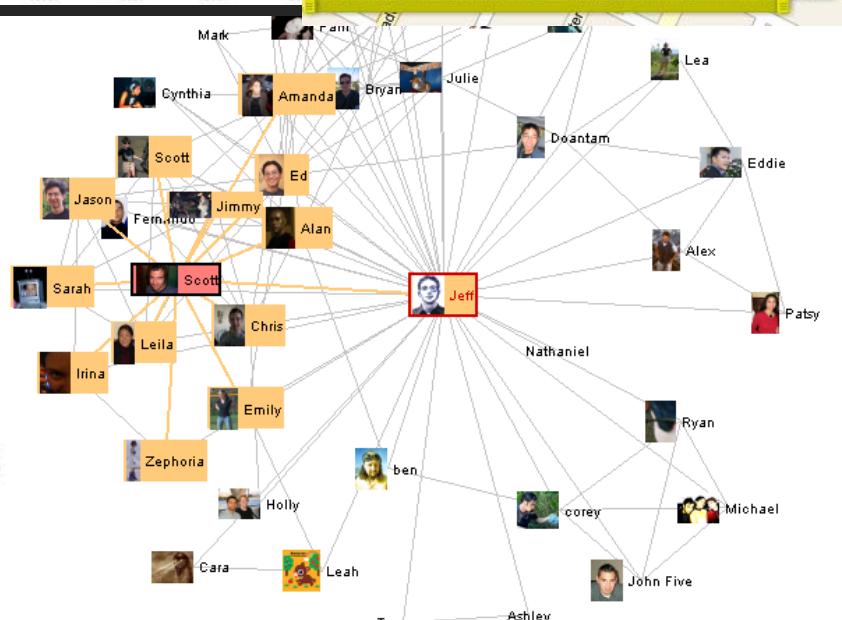

## ParaView

Visualize data sets of size, from small to very large on desktop computers or high-performance clusters, using this open-source, multi-platform application.

# Visual Analytics

- Integration of interactive visualization with analysis techniques to answer a growing range of questions in science, business, and analysis.
- Making sense of multimodal data -audio clips, video, photographs, transcripts, ...

# Visualization of Napoleon's Army

## Carte Figurative des pertes successives en hommes de l'Armée Française dans la campagne de Russie 1812-1813.

Dessiné par M. MINARD, Inspecteur Général des Ponts et Chaussées en retraite. Paris, le 20 Novembre 1869.

Les nombres d'hommes présents sont représentés par les longueurs des zones colorées à raison d'un millimètre pour dix mille hommes; ils sont de plus écrits en lettres des zones. Le rouge désigne les hommes qui entrent en Russie, le noir ceux qui en sortent. — Les renseignements qui ont servi à dresser la carte ont été puisés dans les ouvrages de M. M. Chiers, de Figeur, de Fozondac, de Chambray et le journal inédit de Jacob, pharmacien de l'Armée depuis le 28 Octobre. Pour mieux faire juger à l'œil la diminution de l'armée, j'ai supposé que les corps de Soult, Neveu et du Maréchal Davaud qui avaient été détachés sur Minsk et Mohilew n'en avaient rejoint vers Orescha et Witebsk, avaient toujours marché avec l'armée.

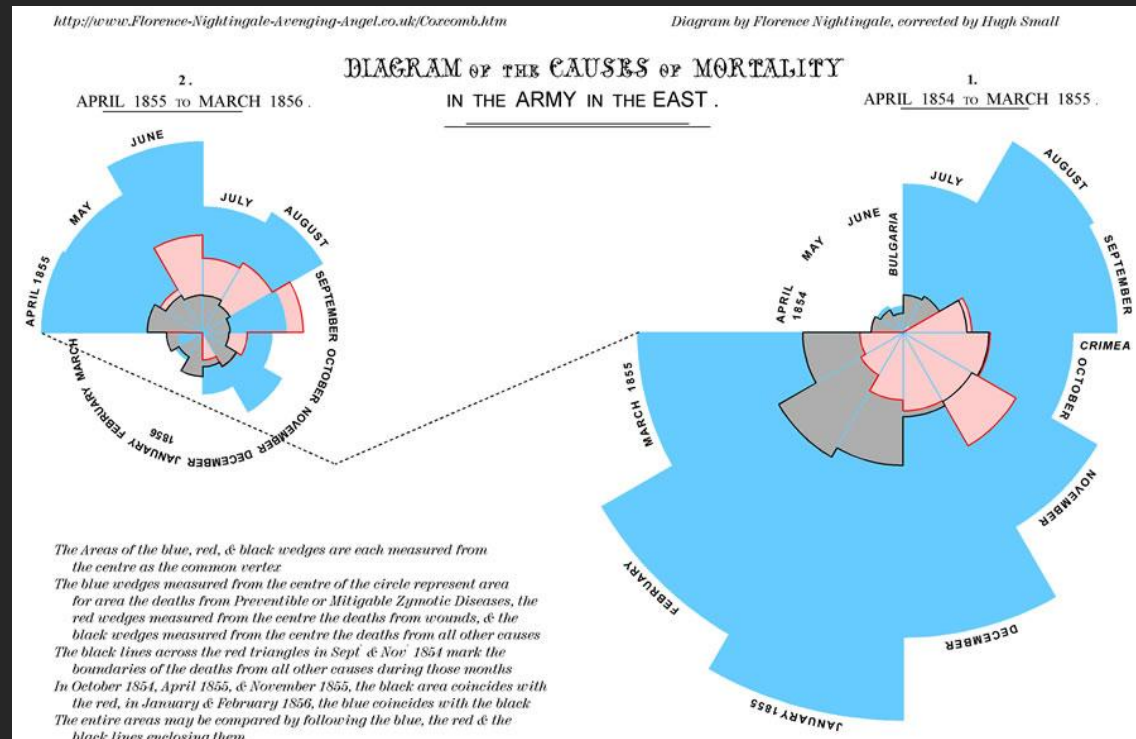

Avec, par Bignon, 2. Par 3<sup>e</sup> Marie 31 07<sup>e</sup> à Paris.

Imp. Lith. Bignon et Desclée.

This map drawn by Charles Joseph Minard portrays the losses suffered by Napoleon's army in the Russian campaign of 1812. Beginning at the left on the Polish-Russian border near the Niemen, the thick band shows the size of the army (422,000 men) as it invaded Russia. The width of the band indicates the size of the army at each position. In September, the army reached Moscow with 100,000 men. The path of Napoleon's retreat from Moscow in the bitterly cold winter is depicted by the dark lower band, which is tied to temperature and time scales. The remains of the Grande Armée struggled out of Russia with 10,000 men. Minard's graphic tells a rich, coherent story with its multivariate data, far more enlightening than just a single number bouncing along over time. Six variables are plotted: the size of the army, its location on a two-dimensional surface, direction of the army's movement, and temperature on various dates during the retreat from Moscow. It may well be the best statistical graphic ever drawn. Napoleon's March poster \$14 postpaid; English/French version \$18 postpaid.

# Impact of Visualization

- Huge impact on policy, planning and disaster avoidance.
- Florence Nightingale's visualization of casualties during the Crimean War

# Impact of Visualization

- Hurricane Visualization for the common man

Demo:

<http://www.msnbc.msn.com/id/26295161?preferredName=Gustav>

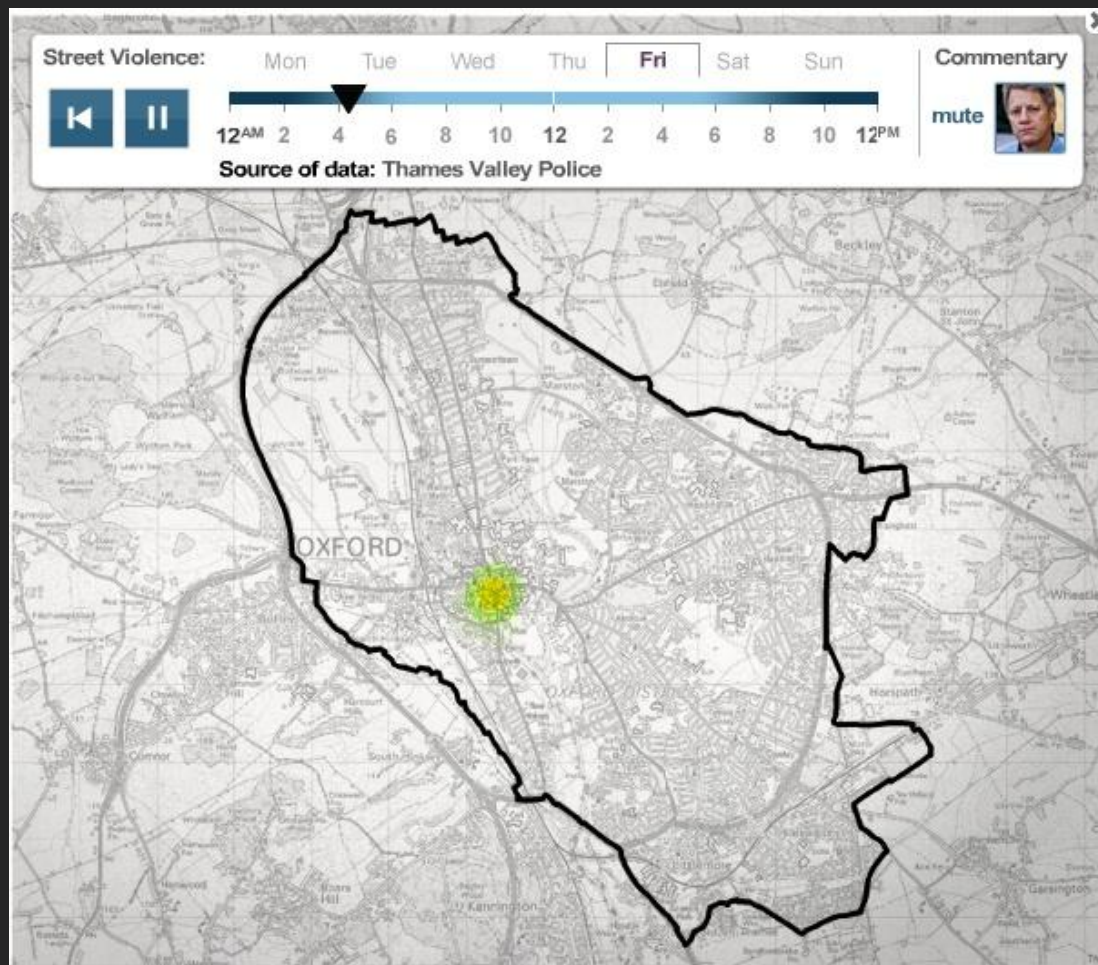

# Impact of Visualization

- John Snow's Cholera Map
- Snow used a spot map to illustrate how cases of cholera clustered around the pump

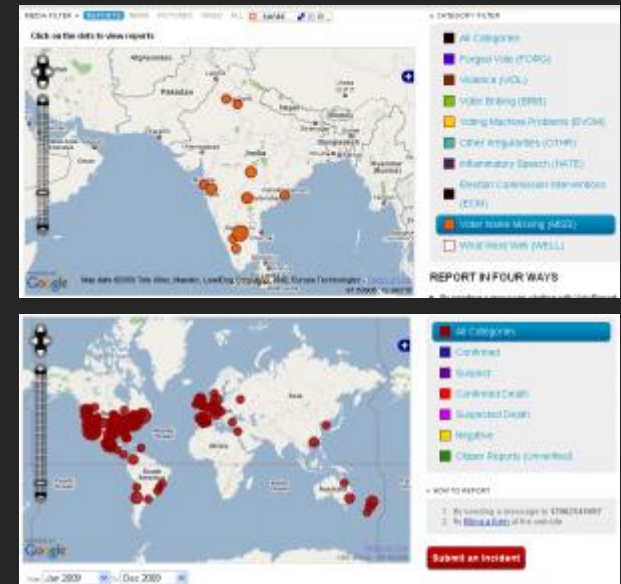

# Truth about Crime - BBC

- <http://www.bbc.co.uk/truthaboutcrime/crimemap/>

# Ushahidi

- “testimony” in Swahili
- Developed to map user reported violence in Kenya after the post-election fallout at the beginning of 2008
- Adapted and used by
  - votereport.in and
  - swineflu.usshahidi.com.

# Good data representation principles

- Breakout into groups of two and identify **five** good data visualization principles
  - 5 minutes

# List of principles

- Integrate and distill the principles
- “Everything should be made as **simple** as possible, but not **simpler**.” ~Albert Einstein

# Contact Information

- Email: [alarkjoshi@boisestate.edu](mailto:alarkjoshi@boisestate.edu)
- Office location: MEC 302A
- Weekly office hours: Tue/Thu 2:30-3:30pm or by appointment

# Resources

- Research Papers
- Websites/Blogs
- Relevant book chapters that will be provided well in advance

# Course Details

- Weekly Reading Response (blog posts) - 10%
- Two In-class paper presentations - 10%
- Assignments - 30%
- Final Project - 50%
  - Client interview + Project Proposal – 10%
  - Annotated bibliography – 5%
  - Alpha release – 5%
  - Beta release – 5%
  - Final Project Presentation, Report (8-pages), Source Code and Client Testimonial – 25%

# Assignments

- Use of tools such as IBM Many Eyes and Tableau Software to visualize interesting patterns in data
- Familiarize yourself with the Visualization Toolkit and its inherent features/techniques
- Use the Processing programming language to implement a visualization technique

# Activities for next class

- Create a blog (wordpress.com or any hosting service of your choice that allows comments) and email me the link
- Create an account on IBM Many Eyes
- Look through some of the popular media (websites/newspapers etc.) and post an image of a good and a bad visualization on your blog before next class
- Watch Hans Rosling's TED talk and post your reaction on your blog by **next week**

# Next class

- Design Principles
- Graphical Integrity
- Graph IQ Test – Bring your laptops

# Reading for next week

- Links to papers will be regularly posted on the class website
1. How not to lie with visualization, B. Rogowitz, L. Treinish and S. Bryson, 1996.
  2. 14 Ways to Say Nothing with Scientific Visualization by A. Globus and E. Raible.
